

Spider Networks' Launches New Primary School User Interface

Interactive web communications leader launches an upgrade to their managed learning environment; Edukit.

London, July 25, 2007 - Spider Networks, the power behind interactive web communications, today launches nationwide a new optional user interface specifically designed for the primary school market. In response to feedback from many of its 200,000 users Spider continues to develop its core education portal, Edukit, providing its students & teachers with more choice of user interfaces.

In this case, they listened to many of their primary school teachers and administrators who wanted a more fun, bold and user friendly experience for their younger children.

“We believe that the primary schools in the UK are underserved by the current managed learning environments”, says Jim Conroy, MD of Spider. “They are demanding simpler, more intuitive user interfaces for their younger children. We have now developed a fun homepage, a very simple webmail interface and an ePortfolio specifically designed for primary school children. It’s all about encouraging use and getting the kids involved.”

The new interface is a domain administration function that can be made for the whole domain or changed to allow users to make their own choice. As an administrator you can change the interface by going to the Management Console.

About Spider Networks

Spider Networks Ltd is based in London with over 650,000 users in the Education, ISP, Business and Consumer markets. Spider develops and deploys communication, groupware and publishing applications in a single integrated online environment. Our award-winning Internet solutions help customers to better communicate, reduce costs and open new revenue streams.

Since 1996, our approach to product design has always been underscored by a firm commitment to be 'simply the best'. We see complex problems as a challenge, and take pride in delivering solutions that are elegant, robust, and easy-to-use.
